Decatur, IL 62523

Dear Rick,

A few months ago you introduced us to Power Up. We were impressed with your demonstration using the Timken Test Machine. Our maintenance crew have found many uses for your product.

We have used a mixture of waytac with 55 Power Up NNL-690 on the High Speed chain on our Elsner rewinder and the large chain drives on our folding and cutting machine. This mixture has shown us better results than the chain lubes we were using. We also used some Power Up NNL-690 in the lube of the gear box on our Conair mixing unit. We have lost gears and bearing twice in one year. After a three month run we inspected the gear box and found no worn place on the gear teeth and the bearing looked good.

The most amazing experience we had was with the front bearing on the 400 H.P. Emerson D.C. motor on our Egan Extruder's Helical Gear Drive. The bearing was hot and making a loud screaming noise. We pumped Power Up Thix O grease into fitting. After several pumps the Power Up loosened up the old grease. We forced out the old hard-burnt grease and the bearing started cooling down and running smooth and quiet. Power Up saved us countless hours of down time and money with this one bearing problem.

We are now using your Power Up Thix O grease cartridges and using up our existing grease cartridges with 1 oz. of Power Up NNL 690 exclusively in our operation and have now reduced our greasing schedule.

I highly recommend Power Up to anyone who is interested in saving money and down time.

James D. Hettmansberger
