To Whom It May Concern:

Llano Utility is developing a new preventative maintenance program to reduce downtime and lower costly repairs. A major part of the program involves the installation of the Kleenoil Bypass Filtration System to our engines and hydraulic units.

To date, we have installed 65 systems on the engines of our excavators, trenchers, backhoes and boring machines. Kleenoil has helped to cut our oil costs by extending our oil drains from 250 hours to 750 hours. Instead of changing our oil and spin on filter, we now change the Kleenoil filter cartridge at 250 hours and 500 hours. We then change the oil and both filters at 750 hours. We have been taking oil analysis at the 250 and 500 hour levels and are seeing exceptionally clean results.

During this oil sampling process, we found one engine that was high in Diesel Fuel content. We examined the engine and made a timely repair saving as much as \$15,000.

Our future plans include installing the Kleenoil Systems on the rest of our engines and on all of our Hydraulic systems. We may also install and use them to filter our fuel systems.

We believe that Kleenoil provides several benefits which include lower oil costs, reduced repairs, and in the long run, will help achieve higher resale values on our equipment

Respectfully,
