Dear Denny:

We are pleased to submit to you the following documentation on some of our equipment after the installation of Power Up after the demonstration on April 5, 1990.

After changing the fluids in my 1989 Ford F350 4 wheel drive diesel, 5 speed transmission we added Power Up of the engine, transmission, transfer case and differentials. After 10 miles of operation the transmission had a noticeable difference in shifting performance, after 2 tanks of fuel the mileage had increased form 15mpg to 18.5mpg. A dramatic improvement over what was expected.

We are very pleased not only with the results we have obtained by using Power Up but also with the service that you have obtained by using Power Up but also with the service that you have provided since the initial purchase.

Sincerely,

Kenny Roberts
