Dear Denny:

Just a follow-up on what Power Up has done for us on our major pieces of equipment since we installed it in April 1990. Power Up was added to the following equipment as well as our Schaeffer greases, Case International 9170, Steiger Lion, Steiger KM325, John Deere 4430 and John Deere 4640.

- 1) Steiger Lion 425hp Caterpillar w/ power shift trans.
Transmission and engine temp have both decreased 10-15 degrees F under full load, smoother hydraulic and transmission operation.
- 2) John Deere 4430 w/ power shift while using this tractor for mainly hay operations the transmission shifted very hard, after Power Up the difference was unbelievable, shifting between gears now is as smooth as the automatic transmission in a vehicle.
- 3) Krause 40' tandem offset disc This is probably the most dramatic result of Power Up that we have encountered to date. We run this disc over 2500+ acres each year and have a bearing failure rate of 6-7 bearings per year. After starting the season we had a bearing go out in the center of one of the gangs, this being a very time consuming and costly repair we decided to put Power Up to the test. We greased the bearing as normal and used the needle oiler to apply a few drops of Power Up to the bearing hoping to get a few more hours of run time, well the few hours of run time was 1600 acres later and the bearing was still operating when we finished, allowing us to make the needed repairs in our slack periods. Our total bearing failure for the year was one bearing. Power Up has actually proven to be an asset instead of a liability by saving us hundreds of dollars in bearing coast and replacement and valuable down time.

We most definitely recommend the use of Power Up to anyone that has farm equipment of any type. Once again thanks for the continued support of Pace Marketing and Power Up of Canada.

Sincerely,

Kenny Roberts
